

# Architecture of Desktop Dispatch

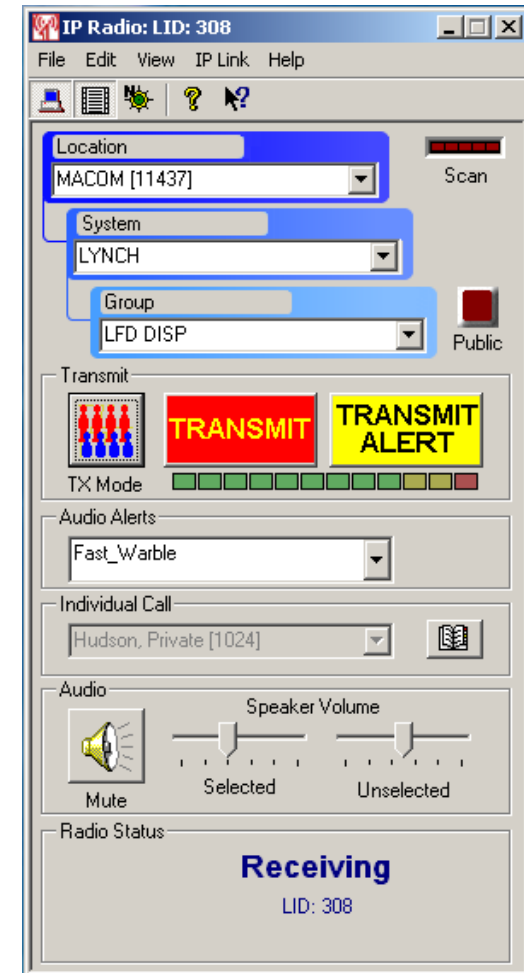

**Communicate using Voice over IP between personal computers and field radio personnel with high quality audio and negligible impact on the network.**

# Radio Control over IP from your Desktop PC

Catalyst Communications Technologies provides Voice over IP products for mobile radio users that improve the reach, quality and frequency of communications between field and dispatch personnel. Our products allow anyone using a standard personal computer with microphone, headphone or speakers to communicate over their existing department or agency network to field personnel using portable and mobile radios.

- Simple, intuitive user interface
- Interface to virtually every radio
- Eliminate expensive leased line charges
- Deploy new positions rapidly
- Backup or primary dispatch
- Communicate over dial-up lines
- Extend dispatch coverage across your network
